

N°1 Staubli device for thermo adhesive welding of "WARPLINK Type 21" warp w:2100mm yoc 1996

With WARPLINK, the laying-in and start-up of weaving of newly drawn in or stationary tied warps is simplified.

The plastic film welded to the end of the warp threads is placed in the weaving machine take up rollers. The resulting time savings in machine downtime at style change is up to 30 minutes.

Location: Italy
Status: working
Delivery: ready
Price: on request
